BUSINESS STREET

JIAN移动商业智慧街区

JIAN mobile business smart district

In 2016, the company introduced an innovative "mobile store vehicle" business model after years of market research and continuous innovation. This pioneering approach combines automation and intelligence with flexible mobility to help entrepreneurs across industries significantly reduce rental and labor costs.

By integrating stationary storefront operations with mobile commerce, this model eliminates expenses like shop rent, utilities, property fees, and staffing while overcoming limitations of location, foot traffic, seasons, or customer demographics. Operators enjoy full autonomy—they can choose when, where, and how long to run their businesses, dramatically boosting efficiency, cutting costs, and substantially increasing revenue potential.

(Note: The translation streamlines repetitive phrases for conciseness, adjusts sentence structures to natural English flow, and emphasizes key benefits with stronger verbs like "eliminates" and "overcoming." Industry terms like "mobile commerce" are used where appropriate for clarity.)
